
Data for occ sensors in industrial spaces?

Posted by Scotopic Squirrel - 2008/01/10 10:12

Does anyone know of any good studies of expected energy savings from occupancy sensors in industrial spaces? warehouses, storage rooms, etc? I know there is a decent amount of studies for offices and some for residential, but i haven't seen anything for industrial spaces (even though occ sensors controlling T5 and T8s in warehouses seems to be a pretty common practice now).

Any help greatly appreciated!
