## Lighting California's Future - PIER

Posted by jporter - 2007/11/06 22:25

---

Lighting California's Future is a \$3.7 million California Energy PIER Program focused on lighting technologies for buildings. The program, which is managed by Architectural Energy Corporation, features nine technical projects using LEDs, tubular daylighting devices, and demand response strategies, and includes a cross-cutting market connection project. Dear Mr. Porter,

My company is interested to know more about this LED lighting market and find out if we could value-add to this industry at California. Do you know who or where can I get a starting point.

Thanks so much for your direction.

Daniel

Daniel,

Our research projects are set for now. However, we will feature our work at LightFair 2008, booth #1381. Please come by to see and talk with us.

Judie
